

Gleichen Call

OCT 9 - 1931

TWENTY-FIFTH YEAR No. 28-29

GLEICHEN, ALBERTA, WEDNESDAY, OCTOBER 7, 1931

SUBSCRIPTION \$2.00 PER YEAR

GIVES ADDRESS ON ECONOMIC CONDITIONS

The meeting was called at 8 p.m. by Pres. N. T. Purcell and after the singing of "O! Canada." The Gilbert family orchestra entertained with some sitting musical selections which were received with enthusiastic applause.

The speaker of the evening Mr. Sandwell was then introduced and took the platform. He soon proved to be a commanding speaker and held his large audience for the next 40 minutes when he spoke on the very timely subject, "The Gold Standard."

He stated at the outset that when he started on his tour some three or four weeks ago Great Britain was on the gold standard. He had advocated for some time that the gold standard be abandoned, "but Britain did not heed him until after he had got out on the road," he humorously remarked. He was extremely glad they had done so. On two occasions in recent years Canada had abandoned the gold standard for a time and there was no damage done to the country at large by such abandonment, rather the reverse, and he predicted that the present abandonment of the gold standard would do a great deal of good. Already he thought he could see an improvement in conditions. There is not enough gold in the world to carry on the world's business, therefore, it was necessary that some other means be used to make up for that deficiency.

At the present time there are approximately eleven billions of dollars worth of gold in the world. It seems an awful lot of money but when the population of the world is taken into consideration it is not very much. Of this eleven billions of gold the United States has five billions hoarded in vaults and France has about three billions, leaving three billions for the rest of the world to do business with and it was not sufficient for the purpose. The United States had no use for this amount of gold, as five years previously she had been getting along very well on two billions. This large amount of gold was barely bringing in enough to pay for its keep.

In fifty years the Allies must pay to the United States some 22 billions of dollars, which means that the United States will collect the gold supply of the world twice. He did not think this possible of accomplishment. Under these conditions it is any wonder that prices of commodities were dropping, while the price of gold was going higher. One of two things can happen either that the United States cancel these debts or that the country buy goods from other nations thus permitting gold to flow out. It is impossible to pay debts unless the States buys goods. In 1928 the break in prices occurred for our wheat which was followed by a break in the prices for other commodities. This was caused by the abnormal flow of gold to the United States thus causing a scarcity in other countries. Money was for the stabilizing of purchasing power and until recent times had filled its purpose reasonably well but through hoarding by two nations it had ceased to fulfill this function to a certain extent. It would be much better for all nations to detach itself from a certain standard in regard to money.

On behalf of the Canadian Club Rev. Mr. Davies tendered Mr. Sandwell a hearty vote of thanks for his lucid lecture on a subject on which most of us know but little.

The president then thanked Mr. and Mrs. Gilbert and family for their entertainment and voiced the appreciation of the club executive for the privilege allowed by the motion pictures management to use the hall before the pictures were started.

ITEMS OF INTEREST FROM NAMAKA

A. W. Klassen was a visitor to Calgary this week.

Mike Brown called on friends here on Monday. He has been spending

the past few weeks with friends at Carleton Place.

Miss Marjorie Wooster is spending a few days with friends in Wayne, Alta.

J. L. Dumka of Calgary is at present relieving the regular station agent who is taking his annual holidays.

Some of our young people assisted with the Rally Day Service program held in Strathmore United Church on Sunday.

Quite a number of the farmers are taking advantage of the fine weather and are hurrying along to get the grain harvested.

Thanksgiving Service will be held on Sunday, Oct. 11th, at 11 a.m. This will be a very special service and it is hoped everyone will make an effort to be present.

Do not forget that the Ladies Aid of Namaka United Church will serve a chicken supper on Monday evening October 12th, in the I.O.O.F. Hall. A very reasonable admission will be charged.

A large number of pupils of Namaka School were successful in winning prizes at the school fair held in Strathmore recently. Credit is also due the teachers who encourage pupils to take up this line of work.

ORAGANTLER NEWS

Mrs. George Grant was called to Calgary to meet her mother Mrs. Robertson of Empress, who was in Calgary on business.

Mr. Halefield late of Standard, an old friend of Pete Beck passed through the district last week saying hello to old friends.

The weather has been good for harvesting operations lately. Cutting except for some green feed is almost done and threshing is in full swing with poor yields.

Dave McBean and B. Haycock were out duck shooting last week but missed the ducks. They were treated to supper by the Duke of the Deer Lodge. The talk was wheat, cattle and hogs and the Canadian dollar at 87 cents.

Si Sheets has everything arranged for the bachelors party except sending a list on the program for the press. It is thought the date would be close after the Gleichen old timers dance.

Now that summer has passed on leaving behind its memories of golf courses and summer cottages, no blistered backs, of ice-cream clothes and one-piece bathing suits, this is a good place to wise-crack "that a bathing suit is a garment with no hooks but plenty of eyes."

GLEICHEN INDIANS CELEBRATE IN DRUMHELLER

For supplying visiting Indians from the Gleichen reservation with two gallons of Concord wine, Norman McVicar, of Drumheller, paid \$50 and costs after pleading guilty to the charge on Tuesday when he appeared before Magistrate L. O'Connor.

The Indians were in the city over the week-end and apparently held a celebration because on arrival back at the reservation, a number were intoxicated. Questioned by Agent Gooderham, they stated that a man with glasses in Drumheller had bought the liquor for them.

The government agent immediately got in touch with Sgt. Clark, of the R.C.M.P., who went out in search of the man with the glasses. A check-up at the government liquor vendor store elicited the fact that McVicar had purchased two gallons of Concord and within two hours he had admitted the offense and was under arrest—Drumheller Mail.

Slow moving pictures are now taken of automobile springs and steering gears. Engineers now make cars ride and steer easier. Soon we will think we are just floating along.

MUCH ACTIVITY BLACKFOOT INDIAN RESERVE

On Oct. 1st, the Blackfoot Indians shipped three carloads of prime beef cattle to the Old Country under the scheme of the Western Beef Producer organization.

These are busy days on the Blackfoot reserve. There are nine crews of men building kitchens and painting. Three crews are building and six crews are painting. Thus the Indian Department is helping the unemployment situation in this vicinity.

Many improvements are being made to the Indian coal mines located three miles east of the Cluny bridge on the south side of the river. Rails and cars have been placed in the mines, screens and a tippie with shutes erected. All a customer needs to do is to drive under the shute and fill his truck. A present the mine is supplying a limited amount of coal but as soon as the improvements are finished the output will be greatly increased. This mine should be a great boon to the farmers and others south of the river who have for sometime been agitating to have the mine run under white supervision as it is now being done.

Our local carpenters are busily engaged these days building a new residence for Col. A. G. B. Lewis. The building is being erected on the Blackfoot reserve near the corner where the turn in the road is made going from town to the Indian Agents office. This building will enhance the appearance to the road way with the numerous residences, offices, hospital extending about a half mile to the Old Sun School. If more buildings are erected along this road it will soon be necessary to call it a street.

Cliff Fleury is a busy man these days erecting brick chimneys in the new kitchens recently built adjoining a number of the Indian residence on the Blackfoot reserve.

W. W. BROWN TELLS OF EXPERIENCES IN THE NORTH

W. W. Brown with Mr. and Mrs. Glen House, are at present in the northern regions around St. Albert. We received a letter from Brown the other day and in one part he states: "I never saw so many farmers broke up here and many milk from 3 to 7 cows two outfits here have a 100 cows and many 20. Gardens—potatoes some have from 4 to 60 acres and more—more potatoes than wheat. Cabbage 25c per 100 lbs. and larger than a water pail, corn very little, but everything grown has gone to seed, looks worse than a field of Russian thistle and probably half of the garden stuff will rot on the ground."

"There have been no casualties? None in camp even though I contributed more or less to the living and all are fat, ragged and dirty."

Glen went fishing the other day and got a couple. That night when we were alone he split the following yarn about himself: "I sought the lake pier and armed with a heavy rod and tackle concentrated on the fine and noble art of fishing as many another good fisherman is wont to do. Possessed of a clear conscience and a peace with the world at large, I was moved to close kinship with lake, the panorama of trees and the faultless sky reflecting peace and quietude which reigned. Distant rowboats lazily drifting on the placid water became as mere shimmering specks, the stillness punctuated by the 'putt putt' of a lone outboard motor several miles distant. What a setting indeed! Picture the small trout, and they were sportive of mood, playing leap frog and turning somersaults on the placid water's surface as far as the eye could see, always at a respectable distance from my cork float set for a maul's fish."

"The seconds grew to minutes, the minutes to hours and then darkness stole over the scene as I fished—and fished. Fisherman's luck, you say?"

OCTOBER 12 AND NOVEMBER 11 SCHOOL HOLIDAYS

At the last session of Parliament was decided to move Thanksgiving Day forward to a date in October as was the custom up until a few years ago and observe November 11th in each year as "Remembrance Day". This has been celebrated heretofore as Armistice Day in conjunction with Thanksgiving, the joint holiday always being observed on the Monday of the week in which November 11th fell. Under the new legislation both days will be observed as public holidays. Thanksgiving has been proclaimed for Monday, October 12th, and Remembrance Day will fall on Wednesday, November 11. Both will be school holidays. As a measure of economy the usual district conventions of teachers will be discontinued for this year. School authorities and teachers reading this notice are asked to give it as wide publicity as possible so that no confusion may result.

FINANCIAL STATEMENT OF THE SOFTBALL CLUB

The following is the financial statement of the Labor Day softball tournament and dance:

Receipts
Field gate \$20.10; Dance \$23.00; Supper \$7.25. Total \$50.35.
Expenditures
Sugar .25c; Wax \$1.20; Tags 20c; Hall rent \$10.00; Washing dishes \$2.00; rent for dishes \$2.00; music \$5.00; advertising \$4.75; G. O'Bray \$1.50; Bremner \$1.90; McMillan \$1.90; J. Lester \$1.90; G. Evans \$1.90; 1 Brown \$1.90; I. Cove \$1.90; A. Robin son \$1.90; Maple Leafs \$2.48; Rough riders 2.43; Battery 2.43; Legion \$2.4c Total \$50.35.

GLEICHEN BAPTIST CHURCH SERVICES

(Communicated)

On Sunday, September 27th, the Baptist Church held in the community hall was well attended with out of town worshippers from Cluny, Hussak, Calgary and Arrowwood. The Apolla Quartet of Arrowwood comprised of Mr. Paul Irwin, Mr. Melvin Bowman, Mr. Rullell Burris, and Mr. F. Mason, sang two songs with Miss Christensen at the piano. The musical help was very much appreciated, and as they kindly promised to come in again we are looking forward to hearing them in the future.

October 4th, the services were held in the community hall dining room and will continue to be there until further notice as the rent in the large hall has been raised until it is prohibitive. Mr. George McElroy preached both Sundays, strongly defending the Bible in every sermon. We will suggest to the public if there are any apparent contradictions in the Bible (that is troubling you) why not put them on a slip and hand them in. These Baptist services are announced one or more times each Sunday over the strongest broadcasting stations in Canada if not in America and Gleichen is mentioned weekly to a million or more people.

The ladies of St. Victor's Church are holding a home-cooking sale and tea from three to eight p.m. on Saturday, October 10th, in Fred Jones store.

Dan McDonald took his brother Alex (Digger), to a Calgary hospital Monday.

To make a long story short I never got so much as a bite. No I didn't get wet—hungry, yes. How was I to face the wife minus fish. Impossible! I called on the kind-hearted butcher late at night when on my way home and explained my predicament.

"He smiled understandingly and said: 'You want fish.'"

"I nodded.
"Let's see, I caught a couple of small ones—five pounders—the other day. You are welcome to one if you will accept it. Did I accept his offer? Yes. He's my friend for life."

FAREWELL AND PRESENTATION TO L. CUTHBERT

On Monday evening last some 70 citizens of Gleichen gathered in the Community Hall to say farewell to Mr. Lawrence Cuthbert, who has resided here for a period of 12 years as manager of the Canadian Bank of Commerce. Out of town visitors at the party were Mr. J. L. McIntosh, M.P.I. Mr. Cuthbert sr., Mr. J. Sligh, all of Brooks, Dr. A. W. Bowles, Calgary, Mr. Hardwick, Armada, and Mr. James Black, Rockyford.

The farewell was sponsored by the executives of the different local organizations of which Mr. Cuthbert was for so long a time a valued member. Mr. L. Michael in his usual able way presided as toastmaster. Mr. James Eglesie, the local artist was at his best on the piano. The program opened with "O! Canada."

The many toasts to Mr. Cuthbert, attested to his popularity and value as a citizen to the community and the loss generally felt at his going away. The very latest in song sheets were brought down from Calgary by Dr. Bowles while the smokes and refreshments were considered particularly good.

The main event of the evening's entertainment was the presentation to Mr. Cuthbert of a beautiful tea wagon and coffee perculator. The presentation was very skillfully made by Dr. Bowles on behalf of himself and the many friends of Mr. Cuthbert and family present at the party. Mr. Cuthbert, when finally given an opportunity to speak, responded in a very appropriate way to the many toasts to him and particularly thanked his many friends for their kind words and wishes and especially for the token of their esteem for him assuring them that he would always treasure it as a souvenir from his many Gleichen friends.

A highlight of the evening was Mr. Beach's oration on the "Pound Sterling". It was generally considered a difficult subject well and capably explained. Of very high merit was Mr. Murray's skilful presentation of the subject "Why a married man should not work". Mr. W. P. Pineau easily came third in his impromptu presentation though brief on, "The Rise and Fall of the Roman Empire."

At 10:45 the meeting closed with the singing the National Anthem. All left wishing Mr. Cuthbert every success at his new home.

Some 20 Gleichen ladies gathered at the home of Mrs. Lou Michal to attend a farewell reception in honor of Mrs. L. Cuthbert who this week is leaving here for McLeod, with her husband and their family. Present in the group were Mrs. Dr. Bowles of Calgary and Mrs. Douglas Hardwick of Armada. A very delightful evening was spent at bridge, community singing and music was enjoyed. A dainty luncheon marked the close of the gathering. Toast were tendered the guest of honor and a presentation was made of a beautiful flower vase. Mrs. Cuthbert very feelingly and aptly responded.

Mrs. W. Hamar of Calgary spent the week-end visiting at the home of Mr. and Mrs. Harry Hamar east of Gleichen.

Wheat threshed in the Gleichen district is running from 6 to 25 bushels to the acre.

Miss Agnes McPhail will speak at Gleichen on Nov. 3rd. This information just received and details of meeting will be given next issue. One thing is known and that is the meeting will be free and open to all.

There has been a shortage of men in town lately for threshing operations.

ST. ANDREW'S CHURCH SERVICES

Holy Communion 9:00 a.m.
Sunday School 11:00 a.m.
Evening 7:30 p.m.

RED STORE

Special Week-end Savings for Friday and Saturday

We're ready with all the delicious and appropriate "trimmings" for the Thanksgiving feast, from the bread and seasoning for the turkey dressing to the pumpkin for the pie.

Apples, McIntosh Reds per box\$1.49
Oranges, Sunkist, 2 doz. for45c
Onions, B. C. No. 1 Grade 11bs. for25c
Cabbage, green heads, per lb.2½c
Pumpkin, 2 1/2 rge tins for27c
Tomatoe soup, Campbell's per tin9c

CELEBRATE WITH US the Birthday of the New, Made-in-Canada GENERAL ELECTRIC REFRIGERATOR

FOR a limited time only we are making a special "Birthday" offer to mark the arrival of the first Made-in-Canada General Electric Refrigerator. From September 14th to October 31st we will present to every purchaser of a General Electric Refrigerator a beautiful Hostess kitchen model of the General Electric Telechron Clock—absolutely free.

Our Local Representative will gladly explain to you, without obligation, why the General Electric Refrigerator has won more than one million completely satisfied owners in less than four years' time. You can own this refrigerator for as low as \$10 down and take two years to pay the balance.

A Birthday Gift for You

FOR SALE BY

Calgary Power Co. Ltd.

(MERCHANDISING DEPARTMENT)

Have you heard the one about the to a church because he was fond of Scotchman who rented a house close rice-pudding.

Home-Taught Fears

What has been described by one writer as "far and away the most conclusive tests of character ever made, since Adam and Eve feared Cain and Abel and made a moral success of one boy and a moral failure of the other," were the elaborate studies recently undertaken by two professors of Columbia and Yale Universities. These scientists tested the character attitudes of over 10,000 school children from eight to sixteen years old, under "normal" school and home conditions. The children did not even know they were being scientifically studied. The net result of these intricate and reliable tests was to show that among agencies in having the greatest influence in building human character, the "home" outweighed the school, the church, the Sunday School, the movies and sports all combined.

This is fact number one for parents to consider. The second in importance is where and how home influence and training makes or mars the child life within its walls. There are three phases of home life out of which are developed the emotional patterns or habits which will make boys and girls into self-reliant men and women, able to meet an imperfect world with high ideals of their own. These phases are, first, the attitude between husband and wife; second, the attitude of sisters and brothers toward each other; and third, the attitude of parents toward children.

Let us take a look at the way in which these home attitudes foster the one emotional attitude which affects our lives more than any other and extends as a sort of background through nearly all the others. This is self-confidence as opposed to fear—not fear of some special thing but a rather generalized fear of life itself.

Vast numbers of people who will face death on a moment's notice, who go through all sorts of real dangers without a quaver, have yet a sort of underlying fear of life's possibilities that seldom leaves them. It is easy to fall into these generalized fears, and there are thousands of ways in which parents actually teach this state of mind to their children. One of the amazing discoveries made by doctors during the examinations in the World War was, that so many perfectly healthy young men had all their lives been convinced that they had heart or kidney trouble or some similar malady and had feared to undertake arduous occupation for that reason. In nearly all cases their fears had been started by hearing symptoms discussed at home.

What is "fear" anyhow? Well, the scientists have done a world of work in the last thirty years on fear, and they find there are three distinct kinds. The first is natural or biological fear—the kind that preserves you from natural perils; the second is intelligent or constructive fear—the kind you get from sound, healthful education; and the third is pathological fear—destructive fear that comes from a wrong view of life, from wrong comparisons of yourself with other people, from wrong attitudes toward your job, and from telling yourself constantly you are not as important as others. As a rule there are just three people who ever tell you you are no good—your parents, your brothers or sisters, and yourself. And nine times out of ten you have begun to tell yourself you are no good because your mother, or father, or brother, or sister, in some way first destroyed your self-confidence.

For example, you hear many people assert they are naturally afraid of lightning, or burglars, or something of the sort. This is not true, because there are but two things that people are "naturally afraid of." The first is a loud noise, and the second is the sense of falling. Dr. John Watson and his students have tried in hundreds of ways to frighten babies, but these are the only two ways in which they have succeeded.

Many mothers say, "My child has always been afraid of the dark." Oh, no, the mother taught it to be afraid. She put the babe to bed and went out and slammed the door, or talked loudly, or scolded, or dropped a basin on the floor. Or, when it got a little older, the mother talked about being afraid of the dark herself, or told the child something dreadful that was likely to happen in the dark.

And it is just this way that children are taught to be afraid of life. Parents need to be taught on the many ways in which they actually teach their children to be afraid of life by shielding them from responsibility. They are missing the greatest educational opportunity this world offers when they fail to put as much responsibility on the child as he can reasonably carry just as early in life as is possible. In this way you build up habits of success instead of habits of failure, courage habits instead of habits of fearing life and dodging its responsibilities.

This has nothing contrary to the duty of teaching the children the second kind of fear—intelligent fear—which is merely teaching them good judgment in avoiding dangers and destructive habits. This kind of fear is merely the negative side of character building and should be carried through to the constructive or positive side—that is, to the development of ideals and ambitions, of goals to be reached and battles to be won. The greatest duty of parents is to fill their children's minds with the belief that they can meet these duties and battles with satisfaction and success.

When intelligent fear is carried to the point of exaggeration it becomes the third fear—diseased or pathological fear. The way out is to develop logical judgment of our own powers and those of our friends. When this is done honestly, when you think "in detail" of your own powers of body and mind and compare them with these same qualities in others, you will be astonished to find that you are superior in most respects to the very people you have taught yourself to be afraid of.

But the great lesson for parents is, that all these attitudes, both destructive and constructive, are chiefly developed in the home. And since Nature has given us but two inborn fears, and all others are learned, and since the home is the greatest agency in the world for teaching all our emotional attitudes, the very large question every family should answer is, "Are we as parents or brothers and sisters teaching ourselves and one another to meet life with fear, self-depreciation and doubt, or are we trying to be a daily inspiration to one another to meet life with the self-confidence and good cheer that calls out each one's best energies?"

The answer to these questions will have more effect on the happiness and success of every member of the family than anything that ever has been or ever will be taught in school or college.

A Matter Of Taste

Canadian ice-cream is delicious but Canadian coffee "almost undrinkable," in the opinion of a group of British cadets who have been attending rifle meets in this country. The cadets said they liked Canada "immensely," and that everyone would endeavour to come back.

Four To a Man

Policeman: "I have found a case containing whisky." Prohibition Officer: "Good, I will send a dozen customs officers to deal with it." Policeman: "I think six men will be enough—there are only two dozen bottles in the case."

Poison Ivy is a native American shrub with a good name, is got plant.

Could Not Check the Summer Complaint A Few Doses Did It

Mrs. B. Coulter, 918-11th Ave. E., Calgary, Alta., writes: "Last summer my youngest son was very bad with summer complaint, and everything he ate he would vomit, and he got so thin I became very much worried. I could not get the discharge checked, so I went to the druggist and he gave me a bottle of Dr. Fowler's Extract of Wild Strawberry and told me it would stop the trouble if anything would. After I had given the boy the first few doses I noticed the discharges were being checked, and in was not long before he was well again."

Evolution Of Peace

Nations Of The World Should Place Armed Forces Under Control Of League

A proposal that the nations of the world place their armed forces under the control of the League of Nations and a prediction that France would lead the way at the 1932 disarmament conference was made by Joseph Paul Boncour, foreign affairs chairman of the Chamber of Deputies, in a statement to the Associated Press.

"I mean that the council of the League of Nations when face to face with a case of proved war of aggression should be empowered under article 15 of the League Covenant to make use of them to settle a war crisis."

"Are other nations, like us, ready? Are they willing to put their permanent air, naval and land forces under the control of and at the disposition of the League of Nations? By this gesture the problem of parity might be solved."

He said that French circles yearned for perpetual peace and are growing apprehensive over next year's disarmament conference.

The statement said that in his opinion the disarmament conference would be the gravest event since the signing of the war treaties and a decisive step in the evolution of peace.

"Upon its success or failure depends the future of peace," he said. "I mean that the failure of the disarmament conference would be the signal for the re-armament of powers which under the peace treaties are subjected to special limitations."

Inasmuch as M. Paul-Boncour is acknowledged as France's greatest authority on disarmament and is certain to be one of France's chief delegates to the disarmament conference in Geneva next February, his statement was considered to be of such far-reaching importance that it will give an entirely new angle to the struggle for the reduction and limitation of armaments.

Air Mail Service

To Aklavik Necessary

Paying Its Way and Must Not Be Abandoned

Whatever happens to the prairie mail that to Aklavik simply must not be abandoned. It was stated by Mr. Veniot, former postmaster-general that under the old system of delivering mail by dog teams in winter and by boat in summer, it took many weeks to reach its destination and even then the service cost the department \$41,000 a year. Contracts for delivery by airplane called for only some \$6,000 additional and instead of giving people of the far north mail once or twice a year they have been receiving several deliveries each winter. It was further stated that the northern air service under a two-cent rate today is paying its way and has a surplus. These facts should remove the Aklavik service from any general plan of cutting out the air mails.—Edmonton Journal.

Saskatoon Fair

Operating Loss This Year Shows Decrease Over That Of 1930

Operating loss on the 1931 Saskatoon Exhibition, including all fixed charges against the exhibition board, amounted to \$18,848.43, it was announced at a meeting of the finance committee. This shows a substantial decrease over the exhibition loss in 1930.

Total attendance was 66,853, with 39,786 attending the grandstand.

In view of conditions this operating loss was considered very reasonable and the exhibition management has operated about \$5,000 under the amount budgeted in 1930.

Externally Or Internally, It Is Good.—When applied externally by brisk rubbing, Dr. Thomas' Electric Oil opens the pores and penetrates the tissue, touching the seat of the trouble and immediately affording relief. Administered internally, it will still the irritation in the throat which induces coughing and will relieve affections of the bronchial tubes and respiratory organs. Try it and be convinced.

Big Ben is to have a better home. The tower which contains the large clock at the House of Parliament in London, England, is being renovated with new facing stone, cut at the quarry to fit.

The so-called flying squirrels are really gliders, gliding from a higher to a lower point by aid of a membrane along the side of the body.

Customer—"How's your tongue sandwich?" Waiter—"It speaks for itself, sir."

The deepest safe diving limit for any submarine yet constructed is 450 feet.

W. N. U. 1906

ACIDITY FOR 10 YEARS

Before he Found the Remedy

Many people endure suffering unnecessarily. This man did. If he had known ten years ago what he knows today, he would have been spared a great deal of suffering.

"I feel I must write a few lines in appreciation of your Kruschen Salts. I have suffered for 10 years from chronic acidity of the stomach. I tried nearly everything, until I was advised by a friend to try Kruschen, which I have taken for the last two months, and I am pleased to say I have had no return of the acidity."

—W. B. Kruschen Salts swiftly neutralises acid, takes all the torment out of it, and gently expels it from the system. And by stimulating your organs of elimination to perfect regular action, Kruschen will prevent this harmful acid from ever accumulating again. After that you'll experience no more misery after meals. Kruschen will keep your inside clean and serene. Pure and invigorated blood will be sent coursing to every part of your body. You'll feel wonderfully energetic and well. As healthy and hearty as it is humanly possible to feel.

Recipes For This Week

(By Betty Barclay)

ORANGE CHEESE SALAD

4 oranges.
2 packages of Philadelphia cream cheese.
1 cup toasted coconut.
1 head lettuce (inside leaves).
Pare oranges and separate sections. Mash cream cheese. Make into balls and roll in toasted coconut. On lettuce covered salad plates, place orange sections with 2 or 3 cheese balls. Top with a spoon of mayonnaise.

TOMATO-RAISIN CONSERVE

2 quarts fresh, ripe tomatoes.
4 sour apples, peeled, cored and cubed.
2 lemons, cubed.
2 pounds sugar.
6 sticks cinnamon.
1 small piece of mace.

(Tie spices in cheese cloth bag.) Boil all ingredients, except sugar, until a thick mass is obtained. Add sugar slowly and boil about 15 minutes or until jelly stage is reached, which is when the mass sheets from the side of the spoon. One cup of nut meats may be added to this just before removing from the fire. Pour into glasses and seal.

The Proven Asthma Remedy. Since asthma existed there has been no lack of much heralded remedies, but they have proved short lived and worthless. The ever-growing reputation of Dr. J. D. Kellogg's Asthma Remedy has given it a place in the field of medicine which no other can approach. It has never been pushed by sensational methods, but has simply gone on effecting relief and making new converts.

Royal Winter Fair

Small Exhibit Of Saskatchewan Livestock Will Go To Toronto

A small but select exhibit of Saskatchewan livestock will go forward to the Royal Winter Fair, Toronto, this fall through the co-operation of Federal and Provincial Governments. Decision to this effect, which revokes the previous decision that no exhibit should be forwarded in view of economic conditions, was reached following a conference between the executive of the Saskatchewan Livestock Board and Hon. Robert Weir, Federal Minister of Agriculture.

In agreeing to terms by which freight charges could be met, Mr. Weir urged that an exhibit of "none but the best should go forward," and offered on behalf of the Federal Government to pay 75 per cent. of the freight costs provided the Provincial Government contributed the remaining 25 per cent.

The assent of the Provincial Government to this scheme was given by Hon. W. C. Buckle, Provincial Minister of Agriculture. Feed allowances on a reduced scale will be made by the Provincial Government as in the past, and the exhibit will be managed by the provincial livestock branch.

The Provincial Government will also contribute 50 per cent. of the prize money, but honoraria will not be granted, as in former years. Recommendations of livestock will be made by selection committees as in previous years, but stock not exhibited previously will not receive much attention.

TO KEEP YOURSELF HEALTHY

The lot of most people is much indoor work and little real exercise. That's why it's sensible, every so often, to give the system a gentle, thorough cleansing with Dr. Carter's Little Liver Pills. All vegetable. 60 years in use.

25c & 75c red packages. Ask your druggist for CARTER'S LITTLE PILLS

Steeplejack's Narrow Escape

Clung For Two Hours To Narrow Ledge At Chimney Top

Nerves of steel and a stout heart kept 63-year-old James Kemp, steeplejack, clinging to his precarious foothold on a 10-inch ledge at the top of a 150-foot chimney until rescued—two hours after his fellow worker, Gandolfo Di Primo, 40, had plunged to death when a scaffold broke.

The two men were working at the top of the stack when the scaffolding slipped. Di Primo, seated on a plank, hurled to earth and instant death.

While firemen, with outstretched life nets, waited for the fall that seemed almost inevitable for Kemp, another crew of rescuers attempted to fire a line over the top of the stack with a rope-gun.

The fifth shot draped a rope over the chimney top and slowly, foot by foot, Kemp hauled in the light line with a heavier rope attached. With a solid hold for him to grasp, Kemp soon drew up a second line with a small swing attached into which he stepped and was carefully let down.

Campaign Against Grasshoppers

Survey Made In Saskatchewan Indicates Necessity Of Action

As a result of a survey made of the south central section of Saskatchewan recently, H. S. Vigor, Provincial Field Crops Commissioner, forecasts the possibility that campaign against grasshoppers will have to be undertaken on a large scale. Mr. Vigor in a report states that outbreaks were reported from points within an area of approximately 10,000,000 acres, enclosed by lines stretching from the international border, near Torquay on the east, to Swift Current and Moncton on the west, thence running north to a line from Govan west 100 miles, and thence south to Torquay.

Members of the staff of the Provincial Department of Agriculture, who gained experience in the grasshopper campaigns of 1920-23, say that in some districts the grasshoppers are as numerous this year as at that time.

Modern Prison In Moscow

Established Seven Years Ago and Is Ruled By Inmates

A self-governing prison colony without guards or bars, the inmates of which decide who shall be admitted and when they shall leave, is Soviet Russia's most striking experiment in advanced penology.

Located 15 miles from Moscow the "ogpu commune" has been established seven years. Its sphere accommodates juvenile incorrigibles in general from the ages of 16 to 25. Robbery and thievery are the chief crimes represented. In the eyes of authorities these offenders are more likely than hardened criminals to respond to new methods of reformation.

There are no fixed terms of imprisonment. Inmates may apply for discharge at any time and the "general meeting," a governing body composed of all the inmates, determines the applicants' fitness for release.

Pool Sales Manager

O. Z. Buchanan Appointed Western Sales Manager With Office At Vancouver

O. Z. Buchanan, who was the first sales manager for the Alberta Wheat Pool in Vancouver, has been appointed western sales manager for the newly organized sales department of the pool with headquarters at Vancouver.

Announcement to this effect was made by R. D. Purdy, Calgary, general sales manager for the pool.

Mr. Buchanan has been with the pool since its inception in 1923, and was placed in charge of sales at Calgary when he last left here. James Gibson, who succeeded him here in 1929, has been transferred to Winnipeg to assist W. C. Folliott, recently appointed eastern sales manager.

Gives Credit To Canada

Successful Flight Due To Invaluable Co-Operation Says Lindbergh

During a courtesy call on the Canadian legation at Tokio, Col. Charles A. Lindbergh attributed his successful flight across the wilds of the northwest territory largely to the co-operation of Canadians.

"Particularly invaluable were the gasoline caches scattered through the northwest Dominion which were placed at our disposal," he told acting charge d'affaires, Kenneth Kirkwood.

"It would have been impossible for me to make such preparations this year."

Cunard Line Commodore Captain Robert G. Mallin was appointed commodore of the Cunard line to succeed Captain E. G. Diggle, formerly master of the "Aquitania," who is retiring. Captain Mallin joined the company in 1899.

Nations Will Uphold Britain

Prestige Must Be Safeguarded Or World Will Suffer

Engrossed as we are in our own troubles in Canada, we may not realize how very serious is the situation in the Mother Country. Yet the outward signs, visible to the world, are sufficiently alarming. We may be sure, when a Labour Prime Minister must not only interrupt his own holiday but feels it necessary to call into council the leaders of the Conservative and Liberal Parties to devise emergency measures to meet an imminent crisis, that the crisis is grave and, indeed, almost desperate.

British stability is a world asset. If anything serious were to happen to the age-long leader of world finance and trade, the whole world would suffer. It is inconceivable under such circumstances that the prestige of British institutions will not be safeguarded by all the power which the leaders of finance in other nations can bring to bear. Some of them may not relish the opportunity to rush to the rescue of the Colossus of other years—but they will rush. They dare not permit anything really dangerous to occur.—Montreal Star.

Scientists Sample

Arctic Sea Bottom

Interesting Report Received By Radiogram From Submarine "Nautilus"

A copyrighted radiogram from the submarine "Nautilus" to the New York American tells how scientists aboard the vessel have sampled the bottom of the Arctic Ocean 5,220 feet from the surface.

The result, says the radiogram from Capt. Sir Hubert Wilkins, commander of the North Pole submarine expedition, was a column of Arctic mud 17 inches long and one inch thick. It was "brown from the surface for 15 inches and then pale blue, representing the deposits in polar waters of hundreds of thousands or perhaps hundreds of millions of years.

Worms in children work havoc. These pests attack the tender lining of the intestines and, if left to pursue their ravages undisturbed, will ultimately perforate the wall, because these worms are of the hook variety that cling to and feed upon the interior surface. Miller's Worm Powders will not only exterminate these worms, of whatever variety, but will serve to repair the injury they have done.

Something To Crow About

Alberta Producing Half Of Western Wheat Crop This Year

Central and northern Alberta today has the best wheat crop prospect in three years.

For the first time in history, one-half of the total wheat crop of the West will be produced in Alberta.

Alberta will have the lowest cost of planting and harvesting in 20 years.

The five-cent government bonus on wheat will mean over \$6,000,000 to Alberta farmers this fall.

Dairy live stock and poultry sales add another \$1,000,000 each week to Alberta's farm income.

Alberta has every reason to face the future with unshaken confidence.—Edmonton Journal.

Cost Of Launching a Novel

Publication Fees Usually Average Around Seven Thousand Dollars

It costs about 7,000 dollars to launch an ordinary novel. Sometimes it can be done for less, but that figure about averages publication costs, inclusive of advance publicity and advertising.

Only time book publishers are not taking really big chances of losing money is on the less spectacular books such as biographies and educational tomes. There's always enough advance sale and orders from libraries to cover costs on books of that type.

Always keep Douglas' Egyptian Liniment at hand, ready to bring immediate relief to burns, sores and felons. Stops bleeding at once. Prevents blood poisoning. Splendid for sore throat and quinsy.

Ontario Mines

Output Shows Decrease In First Six Months Of Year

The value of Ontario mineral output for the first six months of 1931 shows a 12.04 per cent. decrease over the same period last year, the half-yearly report of the Provincial Department of Mines shows. At the same time, gold production of the province reached the record total of \$2,608,196.

Production to the end of June this year amounted to \$50,997,740, as compared with \$58,236,562 for the corresponding period of 1930.

Butter Production

Butter production in Western Canada last year increased by 1,161,424 pounds; the total output being 47,424,201 pounds.

A simple machine which tests the tenderness of canned fruits and vegetables has been devised by government scientists.

The only humming bird found in the eastern United States is the ruby-throat.

GILLETT'S

cleans floors, walls
... everything in the
kitchen

■ Full strength for Sink Drains ■ Full strength for the toilet bowl ■ In solution for all general cleaning

GILLETT'S Lye "Eats Dirt"

Flake Lye

*Lye should never be
dissolved in hot water.

KEEP a tin of Gillett's Lye handy and
you can cut your kitchen cleaning time
in two.

Greasy pots, pans and dishes, soiled
walls, the kitchen floor, etc.: all can
be more quickly and thoroughly cleaned
with a solution of one tablespoonful of
Gillett's Lye dissolved in a gallon of
cold water.

To keep drains free-running, pour a
small quantity of full strength Gillett's
Lye down them each week and they'll
never clog with dirt and grease accumu-
lations.

Gillett's Lye has many handy house-
hold uses. Send for the new FREE
Gillett's Lye booklet explaining how
it will make all your cleaning easier.

Grain Trade
Of CanadaBureau Of Statistics Issues A Compre-
hensive Report

The Grain Trade Report for the
crop year ended July 31 and to the
close of navigation 1930, has just been
issued by the Agricultural Branch of
the Dominion Bureau of Statistics and
consists of 190 pages with 6 maps and
charts. This volume has been thor-
oughly revised to include all the
movements of grain covering the
above periods.

The first part of the report deals
with the domestic movement of grain
—the production, inspection and hand-
lings, at country, interior terminal,
public terminal, private terminal and
private and manufacturing elevators
in the Western Inspection Division
(comprising Fort William and Port
Arthur and all territory West thereof)
and at Eastern elevators. Handlings
of United States grain in the eastern
elevators and of Canadian grain in
the United States are covered. Records
of prices at representative
markets, freight rates and insurance
charges are also included.

Features of earlier issues of the re-
port have been somewhat extended
and enlarged. The movement of grain
from the Head of the Lakes to Buf-
falo and Montreal has been segregated.

The second part deals with the In-
ternational Trade, showing the crops
by the different countries of the world
and the imports and exports of the
various countries of the British Em-
pire and Foreign countries for the
last five years.

No Yacht Race

It was understood that Sir Thomas
Lipton, after a conference with
friends and boat builders, has decided
not to challenge for the America's
cup next year with one of his famous
liners of Shamrock yachts. The feel-
ing prevailed that there was not suf-
ficient time to build a boat in this
country, sail it across the Atlantic,
and get the best out of the boat be-
fore racing time next September.

"SUFFERED
EVERY MONTH"

"WHEN I was twelve years
old my mother wanted me
to take Lydia E. Pinkham's Vege-
table Compound, but I wouldn't.
If I had I might have been a well
girl now. I have suffered terribly
every month."

"The girls where I work used
the Vegetable Compound and
urged me to try it. It helped my
nerves. I intend to keep on
until I am well and strong." Miss
Rose Luma, 6 Brighton Avenue,
Toronto, Ontario.

New British 'Planes
Are Flying RadiatorsPractically Whole Surface Is Used
For Cooling System

Britain's two new mystery sea-
planes, which were built for the
Schneider cup races are really flying
radiators.

The great horsepower which the
'planes' engines develop creates such
a tremendous heat that virtually the
entire surface of the machine has to
be used as a cooling surface.

The ordinary aeroplane with a
water-cooled engine has a radiator in
front, as in a motor car, but to keep
the engine of the two SGB 'planes
running at normal temperatures it is
necessary to dissipate 40,000 British
thermal units of heat every minute.

To bring this about the entire ma-
chine has been virtually surrounded
with a double skin with a waterway
between and an ingenious elastic de-
vice to allow for the half-inch ex-
pansion in the water containers when
the engines are going at full speed.

Upper and lower surfaces of the
single wing of each of the 'planes
and the upper surface of floats have
been adapted to cooling water used to
cool the engine, while the sides of
the fuselage all the way back to the
tail fin are radiators to cool the oil.

The fuselage radiators are so deli-
cate that cold oil would burst them,
so pre-heated oil is pumped into them
before the engines are started. The
water cooling surfaces are so thin that
a fingernail can dent them. The
slightest corrosion causes a leak.

The two new 'planes are slightly
larger all over than the two SGA
'planes which set up world's speed
records of 328 and 331 miles in the
last Schneider Cup races in 1929.

After Non-Stop Record

Britain Has Chosen Pilots For 6,000
Mile Flight

The British Air Service is going to
attempt to beat the United States'
non-stop record made by Russell
Boardman and John Polando, who flew
from New York to Istanbul, Turkey.

It was announced following tests of
a long-range monoplane that the first
long-distance trial will be started
from Cranwell, Lincolnshire, England,
to Khartoum, Anglo-Egyptian Soudan,
a distance of about 4,000 miles
late in September.

Should this flight be successful it
was announced the plane will return
and prepare for an attempt to fly the
6,000 miles from Cranwell to Cape-
town, South Africa without a stop.

This flight if successful would break
the American record.

Squadron Leader O. R. Gayford and
Flight-Lieutenant D. L. T. Bett have
been chosen as pilots for the attempt.

B.C. Fruit Grover Dead

Robert Stark, one of British Colum-
bia's most successful fruit growers, is
dead at Creston, B.C. His most out-
standing success was in 1921 at the
Imperial fruit show in London, Eng-
land, when his fruit captured first
prize in Empire-wide competition in
the twenty-box lot Cox orange apples,
and was also first in similar competi-
tion in five-box lot McIntosh Red
apples. He was a native of Devon,
England, and went to Creston in 1910.

Cultivating Walnuts In B.C.

Walnut culture in British Columbia
is becoming quite successful and trees
this year are producing a heavy crop.
Success has been quite marked in the
Okanagan, the lower mainland and in
Vancouver Island where the growers
have been experimenting for a few
years. And at Escondade where a
grove of walnuts was planted nearly
ten years ago and will now probably
yield about 1,600 pounds of nuts.

The largest sea bird is the alba-
tross, which has a wing span of about
12 feet.

New Medicine Is Costly.

Cortin Is One Of World's Most
Precious Substances

The story of a man who stopped
breathing, apparently dead, and then
was restored to partial health in three
days from cortin, one of the new hor-
mone extracts, became known at the
opening meeting of the American
Chemical Society, in Buffalo.

Cortin is a secretion of the cover-
ing of the adrenals, the small organs
near the kidneys. It was isolated in
the Department of Physiology of the
University of Buffalo, by the depart-
ment head, Dr. F. A. Hartman. The
latest finding, how it works like a
match in the body's muscles to enable
them to burn their heat producing
fuel, was given in a paper by Dr.
Hartman.

The man who stopped breathing
had Addison's disease.

Cortin is obtained from the adren-
als of beaves. These organs from
150 cattle yield enough extract to
dried to make a pile about the size of
a pinhead. At this rate cortin is one
of the world's extremely precious sub-
stances, for it requires the extract of
50 to 150 beaves to make enough for
one day's medicine for one acute case
of Addison's disease.

Trade Ship Leaves Australia

Sails For Canada With Representative
Goods As Cargo

With great ceremony the steamship
"Canadian Constructor" of the Cana-
dian National Steamship Company
sailed from Melbourne for Montreal
with a representative Australian car-
go on board, symbolic of the recently
concluded trade treaty between Aus-
tralia and Canada.

A luncheon to celebrate the steam-
ers' departure was given by the Cana-
dian Trade Commissioner to Austr-
alia, B. Ross. Prime Minister James
Scullin was among the guests. Mr.
Ross declared the treaty demon-
strated what could be accomplished in
the development of intra-empire trade.

The treaty was an acknowledgment
of the view advanced by himself and
Prime Minister R. B. Bennett at the
Imperial Conference, declared Prime
Minister Scullin. This view was that
the dominions must first place their
own industries on a sound footing.

Why It Bounced

A man in a large limousine was
following a "baby" car at a good
speed along a country road. Every-
now and then the "baby" car boun-
ced alarmingly. Finally the man in
the limousine drew alongside the
"baby" and said to the driver:

"Look here, my good man, you are
bound to break your back axle if you
go on as you are doing."

"Good gracious!" was the reply,
"cannot I have hiccups without your
interference?"

Urge National Council

Formation of a union government
or of a national body, akin to the Im-
perial War Council, is urged as a
means of dealing with the present
economic situation in a report on un-
employment placed before a special
committee of the Ontario command
of the Canadian Legion at Oshawa.
The report also recommends forma-
tion of a national employment coun-
cil.

Saskatchewan Industries

The gross value of the manu-
factured products in the eight cities of
the Province of Saskatchewan
amounted to \$71,837,769 in 1929, that
of Regina being \$34,842,487; Sask-
atoon, \$15,961,102 and Moose Jaw, \$14-
646,351.

Wife—"Before we were married
you said mother could stay with us
whenever she pleased."

Husband—"Yes, certainly. But she
doesn't please."

Why Potatoes Are Healthy

Have Alkaline Quality and Neutralize
Acid From Meat

Meat and potatoes seem to supple-
ment each other as naturally as do
bread-and-butter, and there is a rea-
son. Meat has an acid quality and,
if eaten continuously and heartily,
tends to injure the tissues of the
body, produce high blood pressure and
hardening of the arteries. Potatoes
have an alkaline quality and, when
eaten with meat, neutralize its acid
reaction on the system.

Potatoes are two-thirds water,
and their remaining third is a food
which is almost all digested leaving
little residue in the system to en-
courage the action of the alimentary
canal. It is well to eat salads and
coarse vegetables with our concen-
trated combination, meat-and-pota-
toes.

The food elements of the potato
are starch, a small amount of protein,
phosphorus and iron, and a moder-
ate amount of vitamins A, B and C.
All in all, the humble "spud" is a val-
uable food.

Boil potatoes rapidly in salted
water, with the skins on, to save the
mineral salts, and peel before serv-
ing. To make potatoes mealy, drain
but leave them in the kettle and set
them back over a slow fire for a
minute, bouncing them up and down
in the kettle to drive the steam out
evenly. Break baked potatoes as
soon as you remove them from the
oven, to let the steam out. If not
ready to serve them immediately,
wrap them in a towel to absorb the
steam and keep them hot.

Turkish Women Lose Jobs

Street Cleaners Talked Too Much and
Neglected Work

Turkish women are swallowing
their first defeat since the Kemalists
opened all doors to them; they have
been found wanting at the job of
street cleaning.

"No more women street cleaners,"
announced the Istanbul municipality.
"They have been given a four-year
trial, and the streets of the city of
the Golden Horn are dirtier than ever.
Women fell down on the job because
being in the streets gave them too
irresistible an opportunity for leaning
on their brooms and gossiping."

Mother Graves' Worm Exterminator
will drive worms from the system
without injury to the child, be-
cause its action, while fully effective
is mild.

Canada At Bristol Exhibition

A prominent part will be taken by
Canada in the annual exhibition at
Bristol, England, to be held this week.
A Canadian section has been organ-
ized and will consist of the Government
stand and individual booths occupied
by private Canadian firms, according
to announcement from the Depart-
ment of Trade and Commerce.

Search For Hidden Treasures

To search for hidden treasures be-
neath the waters surrounding Cocos
Island in the Republic of Costa Rica,
a company known as the "Cocos Is-
land Treasure, Limited," has been in-
corporated in Vancouver, according to
an announcement appearing in the
B.C. Gazette.

Canadian Banks Sound

Have Withstood Depression While
Hundreds In States Have Failed

Canadian banks are blamed for
many things from time to time, and
there are those who would make ex-
tensive changes in the banking sys-
tem if they had the opportunity, but
for business people and the general
public there must be a great source
of satisfaction in the stability they
have shown during the stress of re-
cent months.

In the same time hundreds of banks
in the United States have failed and
the depositors have lost vast sums
of money. Three large banks in
Toledo, Ohio, decided to close their
doors, and a fourth asked that its af-
fairs be taken over by the State
Banking Department. Assets worth
more than \$100,000,000 are tied up. At
the same time eleven savings associa-
tions under the building and loan
laws of Ohio said they would have to
cease permitting withdrawals.

No situation such as this has faced
any Canadian community nor any
depositor in a Canadian bank in the
present emergency. Unquestionably
there is much to be said for a system
which puts such rigid safeguards
about the people's money.—Ottawa
Journal.

Convention Cancelled

Annual Meeting Of Canadian Clubs
Will Not Be Held This Year

Announcement that the annual
meeting of the Association of Cana-
dian Clubs, scheduled to have been
held in Regina, September 11 and 12,
will not take place, came from Gra-
ham Spry, the association's national
secretary.

While no official reason for the de-
cision was given out, it is understood
that due to prevailing economic con-
ditions the affiliated clubs of the as-
sociation agreed to a recommendation of
the national executive that this year's
sessions be eliminated.

According to a report made by Mr.
Spry at a recent executive meeting,
the association is concluding a most
successful year. There are now af-
filiated with the association 94 of the 105
active Canadian clubs from coast to
coast.

THE RHYMING
OPTIMIST
By Aline Michaelis

SYMBOLS

Not the cloud, or the wave, or the
bough

Is the thing that I love,
Though I linger till dusk turns to dark
As the sky's pageants move.

Though I find in the voice of the sea
Always comfort and peace,
And that deep in the forest's green
aisles,

Care will grant me release.

Through the glory of cloud-flight. I
lool:

To the glory beyond,
And I seek for the stars in the sky,
Not the stars in the pond.

Not earth's beauties before me that
move,

But hid beauties I guess;
And it is not loved hands that I love,
But the love they express!

Persian Balm is magical in creat-
ing alluring complexions. A little
gentle rubbing and your skin is in-
vigorated and touched with the true
beauty of youth. Charmingly frag-
rant. Delightful to use. Cools and
caresses the skin. Relieves all rough-
ness and chafing caused by weather
conditions. Tones and stimulates.
Enhances and protects the loveliest
complexion. Unrivalled as a perfect
aid to beauty and charm.

City Appeals To Women

U.S. Census Shows More Men Remain
On Farm

Girls and women of the United
States were more numerous than boys
and men in the great trek from the
farm to the cities in the late decade,
the Census Bureau reports. Women
now outnumber men in the cities in a
ratio of 100 to 98. That the city has
appealed most to women is shown in
the presence of 9,000,000 more women
in the city now than on the farm.
The female urban population is 34-
800,063, while 25,837,903 remain in
rural areas. The urban male popula-
tion is 34,154,760, while 27,982,320 live
on the farm.

Crosses Channel On Water Skills

Karl Naumestnik, an Austrian, has
walked across the English Channel
from Cape Gris Nez, France, on a
pair of water skis. Conveyed by a
fishing boat, he scudded across one of
the nastiest bits of water in the
world, coming ashore at Shakespeare
Beach, Dover.

Funny, but folks we think are
charming people are those who tell
other people how good we are.

An Amazing Situation

With Millions On Verge Of Starvation
Countries Are Destroying Food

The Federal Farm Board at Wash-
ington has sent telegrams to the gov-
ernors of fourteen cotton growing
states urging that one-third of the
present crop be destroyed in order to
keep up the price of cotton.

This is the proposal which the gov-
ernment of the United States makes
to its cotton-growing states—destroy
one-third of your crop.

Brazil is said to have made a bon-
fire of 11,000 bags of coffee.

California has been pulling up a
proportion of her grapevines to pre-
vent over-production of grapes, and
owing to over-production of peaches
a fund of \$1,500,000 has been raised
to compensate farmers for chopping
down a proportion of their peach or-
chards.

Such news is amazing. The same
policy would propose the burning of
millions of tons of wheat as a means
of improving the price. In China
millions are starving; in various coun-
tries millions of people are unemployed
and facing a winter of hardship.

Yet there is such poverty of resource
in government that nothing can be
suggested but to destroy over-produc-
tion by fire and axe.

What a confession of failure there
is in this situation! What abundance
of proof that the nations must get
together and reorganize the world on
a more sensible basis.

Every nation has built a tariff wall
around herself, refuses to buy and
therefore cannot sell.—Toronto Daily
Star.

British Capital For Canada

Large Sums Sent Over For Invest-
ment In Dominion

The influx of enormous sums of
British capital for investment in Cana-
da over a period of two years has
been one of the factors supporting
the market for high grade Canadian
securities during the current difficult
period, according to A. W. Blue, fi-
nancial editor of the Montreal Star,
in an article published in that paper
recently.

Initiated over two years ago, when
the land-tax question was prominent
in English politics, the flow has gained
momentum in recent months and
runs into many millions of dollars.
The article follows, in part:

"It is stated that local investment
banking houses have handled as much
as \$6,000,000 and \$7,000,000 for in-
dividual British clients, while nume-
rous accounts run to more conserva-
tive denominations.

"So persistent has been the flow of
funds, and in such proportion that the
movement is virtually tantamount to
a 'flight from the pound,' not in-
spired by fear that Great Britain will
find it impossible to solve her prob-
lems, but rather by a desire to escape
the growing weight of taxation and in
all its various forms, now so onerous
a burden in England.

"From the Canadian viewpoint, this
movement is both interesting and sig-
nificant. It reflects a confidence in
Canada and her future possibilities as
an investment centre, which in turn
implies commercial and industrial
growth and progress."

Vocational Bureau

Canadian Federation Of University
Women Wish System To Be
Continued

Delegates to the fifth triennial con-
ference at Ottawa of the Canadian
Federation of University Women,
recommended that the Vocational Bu-
reau, organized in July under the di-
rection of Miss True Davidson, of
Toronto, be continued. The purpose
of the bureau is to gain information,
through research work, of positions
open to women in Canada, give them
advice on matters pertaining to the
positions for which they are suited
and then help to place them. This
work is done principally through the
Sunday Schools and Y.W.C.A.

An invitation was accepted from
the Edmonton University Women's
Club to meet in their city for the next
triennial.

The report of the educational com-
mittee recommended that a study of
the curriculum be made in secondary
schools of Canada, for the purpose
of making it more uniform. It also
recommended the use of the radio for
educational purposes.

Offer Corn As Fuel

Burn-a-bushel-of-corn-a-day clubs
will be formed in this part of Iowa
this fall if present plans materialize.
Corn has excellent heating qualities
and is selling for \$3 a ton less than
coal, farmer proponents of the plan
say. Through the clubs it is proposed
to eliminate the surplus with the hope
of increasing the price of corn 25
cents a bushel.

"What do you think of the Museum
of Art?" "Oh, the pictures are good
enough, but there ain't no good jokes
under them."

Such lather!
Such refreshing
fragrance, such skin
softening and cleansing!

Baby's

—1 Corinthians iii. 8.

Our Father
Will no gentle deed disdain;
Love, on the cold earth beginning,
Lives divine in heaven again;
While the angel hearts that beat there
Still all tender thoughts retain.
—Adelaide Anne Proctor.

How shall we enter when for us
the golden gates roll back? Shall we
go home as children whose home-
coming is not only welcomed and
watched for by the heart of Heavenly
Fatherhood and the heart of Heav-
enly Brotherhood, but by many and
many a one to whom we have given
a smile or a word of love for Christ's
sake?—Rose Porter.

Drakes Of Modern Times

Men Recently Sailed Across Atlantic
In Small Boats

Ten little sailboats set out from
Newport on July 4 on a race across
the ocean to The Lizard, off Ply-
mouth. The winner, the 63-foot "Dor-
ade," ran into Plymouth Harbour, al-
most exactly seventeen days out from
this side. One of the others had to
signal to a passing liner for supplies
and to have two of her crew taken
off after a storm that partially dis-
masted her. Having got what she
needed, she set off again to make up
for lost time.

To set sail across the North Atlan-
tic in a fifty-foot yawl calls for a lot
of courage to begin with. There are
wicked summer storms that shake up
even the biggest liners and in which
these cockleshells would seem to have
but the smallest chance of survival.
To cross in seventeen days, some of
them of light airs, means not only
courage but the willingness to take
every chance.

We marvel at the courage of the
men of old who crossed the Western
Ocean in their tiny ships, but the Brit-
ish and American skippers are their
worthy successors. The ocean has
not changed since 1492 and a 50-foot
yacht in the grip of its wrath would
be just as helpless as a "Golden Hind"
or a "Santa Maria." We still have
our Drakes, our de Gamas and our
Magellans, even in what is said to be
a softer age.

Perfects Automatic
Bread-Making MachineHome-Made Bread Old Possible
Without Worry Of Old Method

Home-made bread (like mother
used to make) without the labour and
worry of old-fashioned methods is the
promise of an Italian inventor, Men-
tore Teodori, of Ferrara.

Signor Teodori, after 30 years of
effort, has perfected an automatic
bread-making machine which prom-
ises to make home-made bread popular
again.

His machine, called "Autopans" or
in English "Autobread," does every-
thing from grinding the wheat to bak-
ing the bread in one operation. Fresh
grain, yeast, salt, water and oil are
poured into the machine and a short
time later finished loaves are taken
from the oven.

It is possible by photographic
means to make simultaneous flame
and pressure studies of individual
explosions in the gasoline engine.

Flour mills of Shanghai, China, are
expected to buy large quantities of
foreign wheat this year.

CORNS
Lift off - No Pain!

QUICK
RELIEF

Just a drop or two of Putnam's on
any sore corn and out comes all the
pain. The corn shrivels up and drops
off. No scar, no pain, no pinching
from tight shoes. You can dance or
walk in comfort. Use only Putnam's
Corn Extractor. Satisfaction guaran-
teed. Sold by druggists everywhere.

PUTNAM'S
